Bachelor of Computer Application, Npccsm (Kadi)

Experience

•Pruthatek *Dec 2025 - Aug 2026*

Full Stack Developer Remote

- Developing and maintaining production-grade full-stack applications using Next.js, NestJS, PostgreSQL, and TypeScript across frontend, backend, and API layers.
- Designed and implemented scalable backend services using modular architecture, REST and GraphQL APIs, Prisma ORM, and PostgreSQL, with emphasis on maintainability and type safety.
- Built and integrated distributed backend workflows using microservices, RabbitMQ, event-driven architecture, Saga Pattern, Outbox Pattern, and idempotent event processing.
- Designed CI/CD workflows using GitHub Actions and Docker, supporting automated testing, deployment, and production development workflows.

•Pruthatek *Dec 2025 - Jan 2026*

Full Stack Developer Intern Remote

- Designed and implemented REST and GraphQL APIs with a focus on scalability, maintainability, and type safety.
- Optimized application performance by identifying and resolving frontend rendering bottlenecks and inefficient backend database queries, improving overall responsiveness.

Personal Projects

•Distributed Event-Driven Task Management System

Distributed backend system using microservices and event-driven architecture.

- Designed and developed a distributed task management system using independent microservices communicating through synchronous APIs and asynchronous event-driven workflows.
- Implemented RabbitMQ-based messaging with Idempotency Keys, Outbox Pattern, Saga Orchestration, and reliable event processing for distributed transaction consistency.
- Designed transactional workflows with idempotent operations and failure-handling mechanisms to maintain consistency across distributed services.
- Implemented centralized logging, error tracking, request correlation, and event auditing to improve observability and simplify debugging across services.
- Technology Used: NestJS, RabbitMQ, PostgreSQL, Prisma, TypeScript, Docker, Turborepo.

•The Marketplace: A Ecommerce plateform

Full-stack e-commerce platform with scalable product, cart, order, and payment workflows.

- Developing a full-stack e-commerce platform using Next.js, NestJS, PostgreSQL, Prisma, and TypeScript with modular domain-driven backend architecture.
- Designed product and variant management supporting category attributes, dynamic variant generation, SKU management, pricing, inventory-related workflows, and product media processing.
- Implemented cart, wishlist, address, order, and checkout workflows with support for guest and authenticated users and transactional order creation.
- Engineered secure payment infrastructure with Razorpay, covering payment intent creation, cryptographic webhook signature verification, idempotent event processing, payment capture, refund lifecycle, reconciliation, and settlement tracking, ensuring consistency between internal order/payment records and the payment provider.
- Technology Used: Next.js, NestJS, PostgreSQL, Prisma, TypeScript, Razorpay, Docker, AWS, Sharp.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, C++, SQL
Frontend & Backend: React.js, Next.js, NestJS, Express.js, REST APIs, GraphQL, Microservices
Databases: PostgreSQL, MongoDB, Redis, Cassandra, ClickHouse, Elasticsearch
Cloud & DevOps: Docker, GitHub Actions, CI/CD, AWS (EC2, S3, IAM), Linux
Messaging & Distributed Systems: RabbitMQ, Event-Driven Architecture, Saga Pattern, Outbox Pattern, Idempotency, Communication Patterns
Tools & Platforms: Git, GitHub, VS Code, Postman, Turborepo, npm
Soft Skills: Problem Solving, Debugging, Team Collaboration, Communication, Self-Learning, Adaptability

Education

•Bachelor of Computer Application *2023-26*

Narsinhbhai Patel College of Computer Studies and Management CGPA: 9.09

Achievements

- Maintained 9.09 CGPA in the latest semester of Bachelor of Computer Applications.
- Built production-grade full-stack applications using Next.js, NestJS, GraphQL, PostgreSQL and MongoDB.
